Subject: Bulletin 160 Investment Guide

Dear Kamyar & Paul,
If I have missed something in the table, Investment Guide to Meet 2030 Water Demands (Draft 09-19-2993), and / or if this issue was resolved in the Oct 8 meeting, please let me know. Otherwise, I think we will need to discuss it on Oct 17.

I had some additional time to look over the numbers, and I am concerned that the water to be transfered to SDCWA by IID, footnote f, is added into the amount of water available for uses / users coming into the State in addition to those already here. As you will recall, California's allotment of Colorado River water will be cut from 5.2 to 4.4 MAFY by 2015 -- halfway into the Bulletin 160 time frame. Therefore, somewhere on this table & in this discussion, we need to note that the amount of water available to California from the COR will be reduced by 0.8 MAFY - the transfer from IID (whatever the final number) is an offset to this -- it does not make up for the entire amount and certainly does not add to what was originally available -- unless the Colorado Region is not considered in the calculations.

Regards,
Anisa
